

NFPA 70E Electrical Safety Training for Qualified Personnel

A Program Offered by BCA
Safety Committee

Instructed By:
Trent Peyton, President
Peyton Technical Services

This four-hour course explains common electrical hazards, risk assessment strategies, and NFPA and OSHA resources on safe electrical work practices.

Specific topics include:

- Identifying electrical hazards
- Injuries associated with electrical hazards
- General safety devices and procedures
- Voltage-rated tool usage
- Personal protective equipment
- Arc flash assessment
- Electrical safety labeling
- Shock and arc flash boundaries
- Protecting non-qualified personnel
- Common OSHA Subpart S Violations

Target Audience: This course is designed for anyone who may work on, around, or interact with electrical equipment, including electricians, maintenance personnel, HVAC technicians, and controls technicians. It is also valuable for safety professionals, supervisors, and managers who need a clear understanding of NFPA 70E requirements and electrical safety responsibilities.

Students will receive a certificate from Peyton Technical Services confirming they have received four hours of electrical safety training for qualified personnel.
